# Chemistry

**UNIT: 4CH1**

**Science (Double Award) 4SD0**

**PAPER: 1CR**

**You must have:**

Calculator, ruler

Total Marks

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- Show all the steps in any calculations and state the units.

### Information

- The total mark for this paper is 110.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

**Answer ALL questions.**

**Some questions must be answered with a cross  $\boxtimes$ . If you change your mind about an answer, put a line through the box  $\boxtimes$  and then mark your new answer with a cross  $\boxtimes$ .**

**1** This question is about acids, alkalis and indicators.

(a) Which of these is the colour of litmus indicator in an acidic solution?

(1)

- A** blue
- B** orange
- C** red
- D** yellow

(b) Which of these is the pH value of a neutral solution?

(1)

- A** 0
- B** 4
- C** 7
- D** 14

(c) Which of these describes a solution with a pH value of 9?

(1)

- A** strongly acidic
- B** strongly alkaline
- C** weakly acidic
- D** weakly alkaline

(d) Which of these is the chemical formula of an acid?

(1)

- A**  $\text{HNO}_3$
- B**  $\text{H}_2\text{O}$
- C**  $\text{NaCl}$
- D**  $\text{NaOH}$

(e) Name the type of reaction that occurs when an acid reacts with an alkali.

(1)

(f) Name the two products of the reaction between hydrochloric acid and potassium hydroxide.

(2)

1 .....

2 .....

**(Total for Question 1 = 7 marks)**

2 (a) (i) State the meaning of the term **solute**.

(1)

(ii) State the meaning of the term **solvent**.

(1)

(b) Explain what is meant by a saturated solution.

(2)

(c) A dark purple liquid is diluted by adding water.

The diluted liquid becomes a pale purple colour.

Explain the process that causes this change.

Refer to particles in your answer.

**3** This question is about chromatography.

Two students carry out separate chromatography experiments to find the  $R_f$  values for five different food dyes, A, B, C, D and E.

- (a) State two things that should be the same in both experiments so that the students can compare their results fairly.

(2)

1 .....

2 .....

- (b) After doing the experiments the students calculate the  $R_f$  value for each food dye.

The table shows their results.

Dye	Student 1 $R_f$ value	Student 2 $R_f$ value
A	0.45	0.45
B	0.63	0.64
C	0.00	0.00
D	0.83	1.20
E	0.30	0.30

- (i) State what can be concluded about dye C.

(1)

.....

- (ii) Explain which  $R_f$  value cannot be correct.

(2)

.....

.....

.....

.....

(c) The diagram shows a chromatogram for a different food dye.

Some distances are shown on the diagram.

Calculate the  $R_f$  value for this food dye.

Give your answer to two significant figures.

(3)

$R_f = \dots\dots\dots$

**(Total for Question 3 = 8 marks)**

4 (a) State the meaning of the term **atomic number**.

(1)

---

---

(b) An atom of element X contains 14 protons, 14 electrons and 15 neutrons.

(i) Which of these is the mass number of this atom?

(1)

**A** 14

**B** 15

**C** 28

**D** 29

(ii) Explain which group of the Periodic Table element X belongs to.

(2)

---

---

---

---

- (c) The table shows the composition of a sample of a different element, Y, containing three isotopes.

Mass number of isotope	Percentage of isotope in sample
32	95.0
33	0.75
34	4.25

Using information from the table, calculate the relative atomic mass ( $A_r$ ) of this sample of element Y.

Give your answer to one decimal place.

(3)

$A_r = \dots\dots\dots$

**(Total for Question 4 = 7 marks)**

5 This is a question about metals and their compounds.

(a) State one property of metals.

(1)

(b) Mercury is the only metal that is liquid at room temperature.

Describe the difference in the movement of particles in liquid mercury and in a solid metal.

(2)

(c) Magnesium is a metal that burns in air.

(i) State one observation made during the combustion of magnesium metal.

(1)

(ii) State one chemical property of the product of combustion that can be used to classify magnesium as a metal.

(1)

(d) In the absence of air, magnesium reacts with sulfur to form the ionic compound magnesium sulfide,  $\text{MgS}$

(i) Give a reason why the reaction needs to be done in the absence of air.

(1)

(ii) Describe, in terms of electrons, the formation of the ions in magnesium sulfide.

Give the charges on the ions.

(3)

(iii) Explain why magnesium sulfide has a very high melting point.

(3)

(iv) Magnesium sulfide reacts with hydrochloric acid to form magnesium chloride and hydrogen sulfide gas,  $H_2S$

Give the chemical equation for this reaction.

6 Ocimene is an organic compound that gives some plants their particular smell.

The molecular formula of ocimene is  $C_{10}H_{16}$

(a) Calculate the relative formula mass ( $M_r$ ) of ocimene.

(1)

$M_r =$  .....

(b) Using ocimene as an example, explain what is meant by the term **empirical formula**.

(2)

.....

.....

.....

.....

(c) The displayed formula of ocimene is

Explain why ocimene is described as an unsaturated hydrocarbon.

(3)

.....

.....

.....

.....

.....

.....

(d) Ocimene is an alkene.

(i) Which of these types of reaction occurs between ocimene and bromine? (1)

- A addition
- B polymerisation
- C precipitation
- D substitution

(ii) Many alkenes have the general formula  $C_nH_{2n}$

Suggest why ocimene does not have this general formula. (1)

.....

.....

.....

(e) Ocimene can take part in combustion reactions.

Complete the equation for the complete combustion of ocimene. (2)

(f) Two different products can form during the incomplete combustion of ocimene. One product is a solid and the other is a poisonous gas.

(i) Identify these two products.

(2)

(ii) State why the gas produced is poisonous.

(1)

**BLANK PAGE**

- 8 A student uses this apparatus in an experiment to study the rate of the reaction between zinc and dilute sulfuric acid.

This is the student's method.

- add a few zinc granules to a conical flask on a balance
- add  $100\text{ cm}^3$  of dilute sulfuric acid to the flask, start a timer and immediately record the mass of the flask and contents
- record the mass of the flask and contents every minute until the mass remains constant

The mass of the flask and contents decreases because hydrogen gas is produced and leaves the flask.

The student uses the mass readings to calculate the total mass of hydrogen produced.

- (a) Complete the equation for the reaction by adding the state symbols.

(1)

(b) The table shows the student's results.

Time in minutes	Total mass of hydrogen produced in mg
0	0
1	80
2	110
3	130
4	148
5	162
6	165
7	184
8	192
9	198
10	204
11	209
12	214
13	218
14	220
15	220

- (i) Plot the student's results. The first three have been done for you. (1)
- (ii) Draw a circle around the anomalous result. (1)
- (iii) Draw a curve of best fit. (1)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(iv) Give a possible reason for the anomalous result.

(1)

(v) Determine a more likely value for this result.

(1)

(c) (i) Explain how the shape of the curve shows how the rate of the reaction changes as time increases.

(2)

(ii) At the end of the experiment there is no zinc left in the flask.

Give a conclusion the student could make from this observation.

(1)

(d) The student does another experiment using

- the same amount of similarly sized magnesium granules instead of zinc
- the same volume of sulfuric acid, but of a lower concentration

Explain why it is difficult to predict how the rate of reaction in this experiment compares with the rate of reaction in the first experiment.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(e) Explain, in terms of particle collision theory, how increasing the temperature affects the rate of a reaction.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

**(Total for Question 8 = 15 marks)**

- 9 A student is given a mixture of two white solid compounds, and a colourless solution containing the same two compounds.

The student is told that one of the compounds is a halide and that the other compound is a carbonate.

- (a) Give two reasons why the student should know, without doing any tests, that one of the compounds **cannot** be copper(II) carbonate.

(2)

1 .....

2 .....

- (b) Describe tests the student could do to show that the mixture contains potassium carbonate and potassium iodide.

P 7 0 7 0 3 A 0 2 5 3 6

10 (a) A student is given a pure sample of sodium carbonate crystals and is told that the formula of the crystals is  $\text{Na}_2\text{CO}_3 \cdot x\text{H}_2\text{O}$

State what  $x\text{H}_2\text{O}$  in the formula shows about the sodium carbonate crystals.

(1)

(b) The student uses this apparatus to find the value of  $x$  in  $\text{Na}_2\text{CO}_3 \cdot x\text{H}_2\text{O}$

This is the student's method.

- find the mass of an empty crucible without a lid
- add some sodium carbonate crystals  $\text{Na}_2\text{CO}_3 \cdot x\text{H}_2\text{O}$  to the crucible
- find the total mass of the crucible and sodium carbonate crystals
- heat the crucible to remove water from the crystals
- allow the crucible and contents to cool down
- find the mass of the cold crucible and contents

These are the student's results.

	Mass in grams
empty crucible	22.75
crucible and sodium carbonate crystals $\text{Na}_2\text{CO}_3 \cdot x\text{H}_2\text{O}$	29.71
cold crucible and contents	25.93

- (i) Calculate the mass of sodium carbonate left after heating and cooling. (1)

mass of sodium carbonate = ..... g

- (ii) Calculate the mass of H<sub>2</sub>O lost from the sodium carbonate crystals during heating. (1)

mass of H<sub>2</sub>O = ..... g

- (iii) Show that the student's results suggest that the formula of the sodium carbonate crystals is Na<sub>2</sub>CO<sub>3</sub>·7H<sub>2</sub>O (3)
- [*M<sub>r</sub>* of Na<sub>2</sub>CO<sub>3</sub> = 106      *M<sub>r</sub>* of H<sub>2</sub>O = 18]

11 A student investigates the temperature change during the reaction between zinc metal and copper(II) sulfate solution.

The student considers two different methods.

### Method 1

- pour  $50\text{ cm}^3$  of copper(II) sulfate solution into the polystyrene cup
- record the temperature of the solution
- add 3 g of zinc powder
- stir using the thermometer and record the highest temperature reached

### Method 2

- record the temperature of  $50\text{ cm}^3$  of copper(II) sulfate solution
- pour the  $50\text{ cm}^3$  of copper(II) sulfate solution into the glass bottle
- add 3 g of zinc powder
- push the bung and thermometer into the bottle and record the highest temperature reached

(b) The equation for the reaction is

50 cm<sup>3</sup> of copper(II) sulfate solution contains 0.025 mol CuSO<sub>4</sub>

A mass of 3 g of zinc is used.

Show that the zinc is in excess.

[A<sub>r</sub> of zinc = 65]

(2)

(c) The student reacts a solution containing 0.025 mol CuSO<sub>4</sub> with an excess of zinc.

These are the student's results.

temperature of 50 cm<sup>3</sup> of copper(II) sulfate solution = 21.1 °C

highest temperature reached = 40.6 °C

(i) Show that the energy change Q for this reaction is about 4000 J

[mass of 1 cm<sup>3</sup> of solution = 1.0 g]

[for the solution, c = 4.2 J/g/°C]

(3)

(ii) Calculate the molar enthalpy change ( $\Delta H$ ), in kJ/mol, for the reaction.

(3)

$\Delta H = \dots\dots\dots$  kJ/mol

(d) The ionic equation for the reaction is

Explain what is oxidised and what is reduced in this reaction.
